Company Overview

The Year at a Glance

- Company/product launched
- App launched on the App Store
- Core product established
- Community established
- Artisan network established
- Marketplace infrastructure established
- Key users/downloads
- Key transactions completed

Biggest Win

Developed Proprietary Single-Picture-Multiple-Garment (SPMG) Technology

Goodheart's Single-Picture-Multiple-Garment (SPMG) technology lets users digitize and list multiple garments from one photo—eliminating the tedious one-item-at-a-time process and making wardrobe digitization and resale dramatically faster.

What We Built

Digital Wardrobe — Users can digitize and organize their physical wardrobes.

Community — A space for sharing outfits, closets, style, and conversations around appearance and wellness.

Marketplace — Users can sell, rent, trade, and give away clothing from their wardrobes.

Artisan Network — Users can discover artisans or post service requests.

Wardrobe Dashboard — Users can track wardrobe value, spending, and activity.

What We Learned

- Users want greater visibility into what they own.
- Clothing can become more useful when digitally connected.
- Personalization creates opportunities beyond traditional retail.
- Artisans represent distributed skills and production capacity.
- Resale and alteration can extend the economic life of garments.

The Strategic Evolution

Year One: Digitize the wardrobe.

Next: Connect the wardrobe to services and commerce.

Future: Connect the wardrobe to decentralized production.

The Bigger Opportunity

Goodheart is evolving from a digital wardrobe application into an infrastructure platform connecting:

People → Clothing → Artisans → Brands → Production

The long-term model includes:

- Alterations
- Resale
- Rental
- Trade
- Remanufacturing
- Decentralized manufacturing

Year Two Priorities

- Grow consumer adoption
- Increase marketplace activity
- Expand artisan participation
- Launch/expand alteration services
- Develop production workflows
- Establish brand partnerships
- Validate decentralized manufacturing
- Convert network activity into sustainable revenue

Closing Statement

Year One was about building the foundation. The next phase is about activating the network—turning Goodheart from a place to manage clothing into infrastructure for how clothing is altered, circulated, made, and remade.

Thank You!
